

## NESSLED™

### NessLED™ Kit

The NessLED™ Kit is a collection of advanced high output slim profile colour matched LED panels specifically designed for easy concealment whilst in use. With a variety of sizes and mounting options, the Panalux NessLED™ Kit is fully customizable to suit the widest of applications.

With a colour temperature variable between 3200k and 5900k, the NessLED™ panels can run from either battery or mains supplies and are controlled using the innovative Panalux F-stop micro, offering flicker free performance.

Complete with the unique custom filter holder system, NessLED™ panels can be diffused quickly and easily using standard filter media without the need for complex or third-party hardware.
